

# BT Global Macro Fund

## Fact Sheet July 2011

ARSN: 132 551 181

### About the Fund

The BT Global Macro Fund is a diversified portfolio of investments with an absolute return focus. The Fund aims to achieve its objective through exposure to quantitative global macro strategies.

### Fund objective

The Fund aims to provide a return (before fees, costs and taxes) that outperforms the UBS Bank Bill Index over the medium to long term. The recommended investment timeframe is five years or more.

### Investment style

The Fund is managed as an absolute return strategy with exposures to quantitative global macro strategies.

### Investment process

BTIM's Macro Strategies team aims to generate alpha using market neutral, top-down strategies in each major asset class including global equities, global bonds and global currency.

The allocation of investment risk across strategies aims to allow the portfolio to achieve its objective in a range of economic environments.

Using extensive research, the team assesses key macro signals with the aim of identifying and capturing trading opportunities across the global markets:

- Economic: trends in world economies
- Technical: market trading patterns
- Valuation: how cheap or expensive are the assets

The process utilises sophisticated computer models and implements buy and sell recommendations using highly liquid derivative instruments (primarily futures and forwards). The portfolio will also employ leverage via these derivatives.

Each asset class is managed independently and forms the building blocks upon which the Global Macro model is built, as illustrated below:

### Performance

(%)	Total Returns		Benchmark Return
	(post-fee)	(pre-fee)	
1 month	-0.94	-0.80	0.42
3 months	0.28	0.63	1.24
FYDT	-0.94	-0.80	0.42
6 months	0.46	1.10	2.46
1 year (pa)	2.84	4.12	4.98
2 years (pa)	5.11	6.40	4.51
3 years (pa)	1.86	3.09	4.60
Since Inception (pa)	1.87	3.12	4.65

### Risk – Since inception

Annualised Standard Deviation	3.92%
-------------------------------	-------

The risk measures are available for periods since actual portfolio inception only. Please note that statistical measures, such as those used above, are more meaningful over longer periods such as 3 and 5 years.

### The Global Macro opportunity

The Global Macro portfolio allocates capital equally across the different strategies. As the alpha streams are relatively uncorrelated, the global macro strategy creates a powerful investment model offering:

- Potential for significant diversification benefits
- Smoother risk-adjusted returns than single strategy approaches
- Customisable approach to suit varying risk requirements

These benefits provide the potential for clients to achieve long-term outperformance in their investment portfolios across economic cycles.

### Investment team

The Fund is managed by the BTIM Macro Strategies team. The team aims to generate alpha and develop global products from a range of top down strategies. Joe Bracken, Head of Macro Strategies, is responsible for the management of the BT Global Macro Fund.

## Portfolio characteristics

Authorised investments	The Fund's underlying strategies will typically use futures, forwards, swaps and options to access asset classes including equities, bonds, currency and commodities.
Risk budget allocation	Capital allocation across strategies is approximately equally weighted
Ex-ante tracking error	2 - 8%
Information Ratio	0.5 - 1.0
Cash and cash equivalents	Typically < 5%
Hedging	The Fund's underlying strategies are expected to deliver returns hedged back to the AUD

## Other information

Fund size (as at 31 Jul 2011)	\$37 million
Date of inception	August 2008
Minimum investment	\$25,000
Buy-sell spread	0.04% <sup>1</sup>
Distribution frequency	Semi-annual
APIR code	BTA0314AU

## Fees\*

Issuer fee**	1.20% p.a.
Performance fee***	20% of the performance (before fees) above the performance hurdle
Performance hurdle	Benchmark plus Issuer fee

## Monthly review

The hits kept on coming in July as markets were again rattled by both the ongoing European debt crisis and US political bickering over whether the country's debt ceiling could be raised to avoid the first ever US default. Through the early part of July European squabbling over the best way to solve the debt crisis in Greece led to a spill over into doubts about the Italian and Spanish economies. Italian 10 Year bond yields spiked to a record 6% as investors feared a default and the stock market plunged over 8%. A European summit mid-July pledged more cash for Greece and greater EFSF flexibility to prevent contagion. Markets briefly relented but by end-July Italian yields were threatening to breach 6% again. The US also appeared paralysed over how to avoid a debt default with Republicans and Democrats presenting competing plans to reduce US spending. Oddly the threat of a default rattled equity markets more than bond markets. US 10 Year Treasury yields fell over 36bps through July as investors sought the safety of US debt while the stock market dropped over 2%. Overall equity markets suffered through a tough July falling 2% on average with some of the European market dropping over 8%. Debt markets had a remarkable rally with long bond yields dropping over 30bps through the month while the greenback appreciated against most of the major currencies.

- Squabbling over debt ceilings and contagion in Europe weighed on equity markets and they returned approx -2% on average for July. Our **Global Equity** strategy was broadly long Europe and was short the US and underperformed by 236bps.
- Most currencies fell or moved sideways for most of the month as the markets suffered a bout of 'risk off' trading. Our **Global Currency** strategy was long the A\$ and short EUR and GBP and returned 130bps for the month.
- Our **Global Bond** strategy was long Treasuries but short Australian debt and our long side underperformed as the markets sought a safe haven and the strategy returned -138bps.

The **Global Macro** strategy returned -0.80% (pre-fee) in July as the positive Global Currency returns was swamped by poor Global Equity and Global Bond returns.

1\_The buy-sell spread represents transaction costs incurred whenever you invest or withdraw funds, and may vary from time to time without notice.

\* You should refer to the latest product disclosure statement for full details of the fees and other costs you may be charged.

\*\*This is the fee for managing the assets of the Fund and overseeing the operations of the Fund. The issuer fee is paid from the assets of the Fund and is reflected in the unit price of your investment.

\*\*\*The performance fee is payable to the manager and is equal to 20% of the amount (if any) by which the Fund's investment performance (before fees) exceeds the performance hurdle. The performance hurdle is the performance of the benchmark (UBS Bank Bill Index) for that day plus the Issuer fee. The performance fee is calculated each business day based on the investment performance and net asset value of the Fund on that day and, where positive, accrues daily in the Fund's unit price. The fee is payable annually as at 30 June. Any under-performance deficit must be recovered in dollar terms before any performance fee can be accrued in the unit price. Any unrecovered performance deficit is carried forward for up to three consecutive years. The performance fee is payable in relation to the performance of the Fund as a whole during each year, and may not reflect the performance of any individual unit holder's investment.

## For more information

Please call 1800 813 886, contact your business development representative or visit [www.btim.com.au](http://www.btim.com.au)

BT Investment Management (RE) Limited ABN 17 126 390 627, AFSL 316 455 (BTIM), is the responsible entity and issuer of units in the BT Global Macro Fund (Fund). A product disclosure statement (PDS) is available for the Fund and can be obtained by contacting your business development representative on 1800 813 886 or visiting [www.btim.com.au](http://www.btim.com.au). You should obtain and consider the PDS before deciding whether to acquire, continue to hold or dispose of units in the Fund. This information has been prepared without taking account of your objectives, financial situation or needs. Before acting on this information, consider its appropriateness, having regard to your objectives, financial situation and needs. An investment in the Fund is not a deposit with or any other liability of the Westpac Banking Corporation (ABN 33 007 457 141) or any other Company in the Westpac Group of companies.

Performance figures are calculated in accordance with the Investment & Financial Services Association (IFSA) standards. Total returns are calculated: to the last day of each month using exit prices; taking into account management costs of the fund; assuming reinvestment of distributions (which may include net realised capital gains from the sale of assets of the fund). No reduction is made to the unit price (or performance) to allow for tax you may pay as an investor, other than withholding tax on foreign income (if any). Certain other fees such as Contribution fees or Withdrawal fees (if any) are not taken into account. Performance data (pre-fee) is calculated by adding back management costs to the (post-fee) performance. Past performance is not a reliable indicator of future performance.

If market movements, cash flows or changes in the nature of an investment (eg a change in credit rating) cause the Fund to exceed any of the investment ranges or limits in this document, this will be rectified by BTIM (RE) as soon as reasonably practicable after becoming aware of it. If BTIM (RE) does so, it will have no other obligations in relation to these circumstances. The procedures, investment ranges, benchmarks and limits specified in this document are accurate as at the date of its issue, and BTIM (RE) reserves the right to vary these from time to time.

BT Investment Management (RE) Limited is a member of the Westpac Group. Neither BT Investment Management (RE) Limited, nor any other company in the Westpac Group, guarantees the repayment of capital or the performance of the product or any particular rate of return.
